# Japan's Progress of Policy Formulation at the Demand Side: Toward Carbon Neutrality

JAPAN

- In 2021, Japan announced the target to achieve carbon neutrality by 2050.
- April 2022, amendment of energy concervation law was made to include "non-fossil fuels" on top of fossil fuels for energy efficiency improvement. Demand Response is also included as the energy efficiency concept.
- Headed by Prime Minister Kishida, and participated by Ministers and representatives from industry, series of discussions are being held to plan for Green Transformation (GX).
- Roadmap for GX by technology/sector was announced in December 2022.
- For achieving the carbon neutrality, comprehensive approach covering the building sector is formulated.
- Promotion of introducing zero energy buildings, stock buildings energy efficiency renovation, and incessant efforts in operational energy efficiency improvement are the key in the building sector.

# Energy efficiency and demand-side actions are the key for Japan to achieve carbon neutrality by 2050.

#### Image of Achieving CN by 2050

Energy consumption

Strengthening Energy Efficiency and Demand Side Actions

- Industry: Annual reporting system, benchmark system, technology innovation and financial support
- Residential/Commercial
  - Top-runner standard, ZEB / ZEH, Review for buildings standard
  - CN of water heaters, DR ready, and Electric/Gas Retailers' Energy Efficiency Pledge and Review
- Transport: Promotion of clean vehicles, fuel economy standard, rational use of energy by freight trucks, energy efficiency improvement in freight supply chain

CCS, DACCS, BECCS

#### Expanding non-fossil fuels

- Expansion of non-fossil fuels
- Encourage self-consumption : renewable energy and hydrogen
- Industry/commercial/ transpor sector's increased use of non-fossil fuels
- Residential/commercial use of carbon neutral water heaters
- Optimal use of energy with the Demand Response
- Introduction of DR ready appliances

#### **Directions for Further Deepening Japan's Energy Efficiency by 2030**

#### Energy savings in each sector - to be accumulated to save energy consumption by 62 million kL in 2030

**Estimated Energy Savings by Technology Estimated Energy Savings by Technology** (unit: Million kL, and % in total) New Energy-saving house 2.5 mil kL, 21% Diffusing next-generation vehicles, 9.9 mil kL, 43% Renovation of existing house improving fuel efficiency 0.9 mil kL, 8%  $\Rightarrow$  One of every two vehicles would be a • Efficient water heaters Residential 2.6 mil kL, 22% next-generation vehicle Transport • LED lights and OLE displays 1.9 mil kL, 16%  $\Rightarrow$  Fuel cell vehicles: More than 100,000 units 12 Mil kL • EE Improvement through Top-runner 1.7 mil kL, 14% 23.0 Mil kL in maximum annual sales Standard 13.2 mil kL, 57% Other Measures (Rail, Air, Marine and Urban Transport) • Home energy management system 2.2 mil kL, 18% • Promoting economy-wide campaign 0.2 mil kL, 1% • New Energy-saving building 4.0 mil kL, 29% Renovation of existing building 1.4 mil kL, 10% Major industries (steel, 4.9 mil kL, 25% chemicals, cement, paper-pulp, Commercial • Efficient boiler 0.5 mil kL, 4% oil processing, food) Industry 2.0 mil kL, 14% • Efficient lighting 13.8 Mil kL 0.74 mil kL, 4% Promoting plant energy 0.6 mil kL, 0% • Management of refrigerant 19.4 Mil kL management technology 3.4 mil kL, 25% Top-runner standard Cross-industry introduction of Building energy management highly efficient equipment 2.4 mil kL, 17% 13.8 mil kL, 71% system  $\Rightarrow$  Low-carbon industrial furnaces, Promoting economy-wide high-performance boilers, etc. 0.023 mil kL. campaign 0.2%

### Roadmap for Japan's Green Transformation : Buildings Comprehensive Approach to Strengthen Energy Efficiency

Subsidy provision for the building sector (Supplementary Budget FY2023 (provided from April 2024))

- Renovation for residential building (e.g., double glazing window): 135 billion yen
- Heat pump water heater, hybrid water heater, and residential fuel cell: 58 billion yen
- Condensing boiler for rented apartment: 18.5 billion yen
- Energy efficiency renovation, energy efficient residential facilities (including bath): 210 billion yen

## **Government Support and the Private Sector Business Expansion**

In the second supplementary budget for FY2023, for households, a total of 421.5 billion yen are being provided for the energy efficiency of residential sector.

				for Plant Expansion		
	Subsidy for O	wners				
Heat Pump Water Heater	• 100,000 Yen/ui	nit		• European market entry from 2006, and from 2019 maintain <u>the top share in pump-type</u>		
Hybrid Water Heater	• 130,000 Yen/u	nit	Corp.	<ul> <li>Invest more than 40 billion yen in 2022, and decided to establish a new plant for pump-</li> </ul>		
Residential Fuel Cell	• 200,000 Yen/ui	nit		type heaters in Poland		
Heat Pump Wa Heater	ater Hybrid Water Heater	Residential Fuel Cell	Panasonic	<ul> <li>Started production of Residential heat pumps for Europe in the Czech Republic from 2018</li> <li>The company announced plans to more than triple its production capacity, Invest 45 billion yen by 2023 to 2025</li> </ul>		
Source: Panason	ic Source: Rinnai	Source: Aisin Corp.	Mitsubishi Electric.	<ul> <li>In 2016, as a production base for Europe and Turkey, Established a factory in West Turkey.</li> <li><u>Announcement of Total investment of 15</u> <u>billion yen in 2021 and 2022 (including new</u> <u>factory construction)</u></li> </ul>		

APAN

**Overseas HP Production and Investment** 

# **Estimated Distribution of Stock: Residential Buildings in Japan**

#### Distribution of Residential Building Stock by Energy Efficiency Standard

- An estimation is being made to consider the potential share of Zero Energy House in 2050.
- If all the newly built residential houses are ZEH from 2021, its share will reach 28.7% by 2050.
- This results show the needs for additional measures such as (1) operational energy efficiency improvement, (2) strengthening of energy efficiency renovation for existing stocks, and (3) promotion of ZEH in apartment buildings.

# JAPAN

## Japan's evolving energy efficiency policies areas

nent of the rvation Act	Expanding Use of Non-fossil fuels	<ul> <li>Non-fossil Fuel Target for Industry Sub-Sectors and Transport</li> <li>Cement, paper and pulp, petrochemical, iron and steel, and automobile manufactures, and transport business entities are required to meet non-fossil fuel target by 2030.</li> <li>In addition to the five industries, <u>each business subject to periodic reporting has set a</u> <u>"target for transition to non-fossil energy".</u></li> </ul>
iendr		Demand Response Implementation by Large-scale Energy Users
2022 Am Energy C	Demand Response	<ul> <li>Those entities required to report annual energy consumption to the Ministry are encouraged to report the number of frequency that they implement DR (both turn up demand and turn down demand.</li> </ul>
		Carbon Neutrality of Water Heaters
/ Ilicy Areas	Residential Water Heaters	• Along with the boilers' energy efficiency improvement, it is being planned to require manufactures to change the product configuration by increasing the share of water heaters that can contribute to carbon neutrality (heat pump, hybrid heat pump, and hydrogen combustion water heater).
Energy Efficienc) ee Discussion Pc	Appliances	<ul> <li>Demand Response Ready Appliances</li> <li>It is being planned to introduce the DR ready requirements for appliances. Careful considerations are being made to determine the appliances for DR ready, consider cost transfer mechanisms, and estimate the benefits and costs. Creation of market environment induces implementation of demand response is also under consideration.</li> </ul>
)24 E mitte		Electric/Gas Retailers' Energy Efficiency Pledge and Review
2023-20 Subcom	Consumers' Engagement	<ul> <li>To increase consumers' engagement on energy efficiency, electric/gas retailers would be required to set energy savings target at the demand side, which will be reviewed by government.</li> </ul>
